Requirements for the solution of exercise 1

Your solution to Exercise 1 should meet the following requirements.

- The minefield should be read from a file. Errors in the file format, such as unexpected characters or different long targets, should be recognized and reported.
- The file name is passed as command line argument to the program. Wrong number of arguments should be reported.
- Your program code is readable and spit up into functions.
- The test methods of Rust should be used.
- If appropriate, use the ?-operator to propagate errors.
